REMARKS

The Specification is amended to include the amendments made to the international application and to insert titles and otherwise put the text in form for U.S. prosecution, as shown in the Marked-Up Specification Showing Amendments. (The amendments made in the international application do not add new subject matter to the application, but rather simply briefly discuss a few prior art references and rearrange the presentation of several of the paragraphs in the Summary Of The Invention section). A Clean Version Of The Amended Specification is provided for the convenience of the Examiner for examination purposes.

An Abstract has been added herein to conform to U.S. practice.

The claims were amended in the international application. Therefore, the amendments sought herein show amendments to the latest claims in the international application. As such, the claim amendments to claims 1-6 herein are being made to put the claims in better form for U.S. prosecution. In addition new claims 7-19 are being added to simply expand the number of claims to achieve comparable claim coverage without the use of multiple dependent claims. All of the claims presented herein are consistent with and supported by the disclosure and the original claims. Applicant respectfully submits that the application is being filed with payment for the standard maximum of 3 independent claims and a total of no more than 20 claims. With entry of the amendments presented herein, Applicant remains consistent with such standard as this application will now include 1 independent claim and a total of 19 claims. However, if any further fee is due in connection with this Preliminary Amendment, the Commissioner is hereby authorized to charge any additional fees (or credit any overpayment) associated with this communication to our Deposit Account No. 13-0019.

Respectfully submitted,

By:
